Naran : <u>David Gomes de Araújo</u>

Ano/Turma : 11º /A

Tópiku Servisu : Peskiza iha Livru, Laboratorium no Internet

Tipu Servisu : Individual

Utiliza Lian : Tétum

Formatu Fiseiru : PDF

Data Simu : 25 – 03 – 2017; horas : 09.00 – 10.45

Data Entrega : 08 – 04 – 2017; horas : 09.00 – 10.45

escore

1. Kompleta imajen no explikasaun ba termu físiku (*hardware*) husi komunikasaun dadus nebe'e alista ona iha tabela laran

NO.	TERMU KOMUNIKASAUN DADUS	IMAJEN	EXPLIKASAUN
1.	Kabu UTP		 ✓ Defenisaun : = Kabel UTP(Unshielded twisted-pair), kabel UTP halo husi material ne'ebe mak transfer tembaga, no nia iha isolasi husi plastik no bunkus husi isolasi ne'ebe bele jaga/ melindungi kabel UTP husi ahi no matetial sira ne'ebe fisiko no todan. Kabel UTP iha pasangan kabel ha'at, ne'ebe belit malu, no husi pasangan kabel ha'at ne'e, iha sira nia kode kor ne'ebe lahanesan. Kabel UTP nia laiha pelindung husi interface elektromaknetik. ✓ Funsaun : = kabu UTP nia uza sai hanesan jaringa LAN(Local Area Network) iha sistema komputador, no kabu UTP nia iha kapasidade atu lori data/Pengantar data, husi komputador ida ba komputador sira seluk no mos bele print saida deit liu husi kabu UTP ba iha Printer.

2.	Kabu FTP	 ✓ Definisaun : = FTP(File Transfer Protocol) mak hanesan protocolo internet nian ida ne'ebe lao liu husi aplikasaun ne'ebe iha standar atu transfer dokumentu/file husi komputador ba mesin no iha internetwork. ✓ Funsaun : = Funsaun FTP mak hanesan prokolu ida ne'ebe maka troka dokumentu/data, no mos atu haruka/transfe file/dokumentu husi komputador ne'ebe mak konekta hela ba rede/Jaringan, hanesan Internet. FTP hanesan protokolu internet ne'ebe palin primeiru ema halo dezenvolvimentu, no sei uza to agora hanesan ita halo (Download) katak hasai no (Upload) katak hatama dokumentus husi Kliente FTP no Server FTP.
3.	Kabu STP	 ✓ Definisaun: = Kabu STP(Shielded Twisted Pair), mak hanesan kabu Rede nian ida ne'ebe iha nia par ne'ebe sempre belit malu no iha nia laran iha amunium foin ne'ebe pasan iha kabu, atu nu'une bele fo seguransa ba ganguan husi interfeksi eletromaknetik, no kabu presisa atu halo media transmisaun ne'ebe terarah no importante ba troka data. ✓ Funsaun: = Kabu STP nia funsaun mak hanesan media transmisaun ida ne'ebe uza material eletroniku, atu halo ligasaun entre ida ne'ebe fahe no ida ne'ebe simu, atu nu'une bele troka dadus ba malu. Material eletroniku hanesan telefone, komputer, televisaun sira presisa media transmisaun atu nu'une sira bele simu dadus.

4.	Kabu SSTP		 ✓ Definisaun: = SSTP(Secure Socket Tunneling Protocol) mak VPN tunnel ne'ebe mak fo mekanismu ida hodi transportasi/traffic L2TP PP liu husi Channel SSI 3.0. SSL mos iha transpotlevel security ho Key-negotiation, no mos traffic integritu checking. Ema ne'ebe uza SSL liu husi Port TCP 443 ne'ebe fo lisensa ba SSTP atu liu firewall no server proxy. Ho ida ne'e SSTP fo asesu ba VPN ho level Rede ne'ebe mak nakonu. ✓ Funsaun:
5.	Kabu Coaxial	plastic jacket dielectric insulator metallic shield centre core	 ✓ Definisaun : = Kabu Coaxial mak kabu ida ne'ebe uza konduktor rua, Kabu Coaxial mak kabu Rede/jaringan Media transmisaun dadus ne'ebe terarah. Kabu Coaxial mos iha nia naran ida mak BNC(Bayonet Neur Connector). ✓ Funsaun : =Funsaun Kabu Coaxial mak fahe signal/frekuensi ne'ebe ema bolu Signal Broadband. Kabu Coaxial mak kabu ida ne'ebe uza ba iha Topologi Rede/Jaringan Ring no Bus.

6	Kabu Fiber Optic	 ✓ Definisaun: = Kabu Fiber Optik mak hanesan kabu ida ne'ebe halo husi espellu ne'ebe ki'ik, no halo atu muda dadus hanesan Gelombang Cahaya. ✓ Funsaun: = Kabu Fiber Optik nia funsaun sai hanesan parte importante ida iha jaringan LAN(Local Area Network), WAN(Wide Area Network) no MAN. No biasa ne'e kabu fiber optik ne'e uza ba edificio boot, no komponhia ne'ebe boot. ✓ Definisaun:
7	Konektor RJ45	 = Konektor RJ45 mak konektor kabel Ethernet, barak liu ema uza konektor RJ45 ba iha topologi Rede Komputador LAN / ba tipu Rede sira seluk. ✓ Funsaun : = Konektor Rj45 ita sempre hetan nia Kabu UTP nia tutun no halo ligasaun ba transceiver. Fungsi konektor RJ45 ne'e sai hanesan parte ida husi Kabu UTP ne'ebe ba iha trasceiver. Konektor RJ45 uza atu halo ligasaun kabu ba iha port RJ45.
8	Crimp Tool	 ✓ Definisaun : = Crimp Tool/Crimping tool mak material ida ne'e uza atu pasan kabu UTP ba RJ-45/RJ11. ✓ Funsaun : = Crimping Tool nia funsaun atu Kua Kabu, Hasai kabu kulit, no pasan konektor.

9.	Cat Sixs		 ✓ Definisaun : = Cat sixs mak material kik ida ne'ebe halo husi plastico at no bessi. ✓ Funsaun : = Cat sixs nia funsaun atu kua kabu nia kulit.
10.	LAN Tester	Multi-Network Modular Cable Tester TEST PRO-OUT ROCKATOR FINITIAL 123454780 AUTO MARAMAL OFF ON MARAMAL O	 ✓ Definisaun : = LAN teste mak material ida ne'ebe uza ho check/koko kabu UTP ne'ebe pasan ona RJ-45 no RJ-11. ✓ Funsaun : = Funsaun LAN Tester atu koko kabu Jaringan nian husi komputador, hanesan kabu UTP, STP no sira seluk tan.
11.	Obeng	I THE COLUMN TWO IS NOT THE COLUMN TWO IS NO	 ✓ Definisaun : = Obeng nia iha set ne'ebe oinoin, no iha obeng ne'ebe naruk no iha mos obeng ne'ebe badak, obeng halo husi besi no plasticu. ✓ Funsaun : = Funsaun Obeng atu sobu/loke parfuzu sira hotu ne'ebe iha saida deit, no bele mos koko kabu ne'ebe ahi tama hela.

12.	Network Interface Card (NIC)		 ✓ Definisaun: = NIC(Network Interface Card) mak hanesan kartu ida ne'ebe sai hanesan Ponte ba iha komputador, ba iha Rede/Jaringan komputer. Tugas NIC mak atu muda aliran/energia dadus Paralel iha bus komputer sai fali dadus serial atu nu'une bele fahe ba iha media Rede/Jaringan. ✓ Funsaun: = Funsaun NIC uza ba Simu no Fahe dadus liu husi kabu Rede/Jaringan, no bele fahe data ba komputador seluk, no ita mos prepara uluk dadus husi komputador, atu nu'une bele fahe liu ba iha media koneksaun, no atu kontrola aliran dadus (Flow) iha komputador ba iha sistema perkabelan.
13.	HUB	S.Hub S.Hub HUB	 ✓ Definisaun : = HUB hanesan material jaringan nian ida ne'ebe serbisu iha OSI laiar 1, physical layer. Atu nu'une nia servisu labele liu fali hanesan parte ida ne'ebe atu halo ligasaun/concentrator. HUB la konhese MAC Addressing/Physical Addressing ✓ Funsaun : = HUB nia funsaun hanesan material ida ne'ebe simu siknal jaringan nian husi kompuador no sai hanesan centru ne'ebe mak halo ligasaun ba komputador sira hotu. No HUB mos bele haforsa signal kabu UTP.

14.	Switch	Switch	 ✓ Definisaun : = Switch mak hanesan komponente Rede komputador nian ida ne'ebe uza hodi halo ligasaun ba iha HUB no halo Rede komputador ne'ebe boot, halo ligasaun entre komputador ba komputador sira ne'ebe mak iha bandwidth ne'ebe boot. Switch halo operasaun ba iha layar rua mak hanesan : (Data Link Layer) no OSI model. ✓ Funsaun : = Switch nia funsaun mak hanesan material ida ne'e sai hanesan komanda ou fahe signial dadus husi komputador ida ba komputador sira seluk,
15.	Repeater	Pengertian Repeater dan Fungsinya Lengkap	 ✓ Definisaun: = Repeater ne'e mai husi lian Inggris "Repeat" katak repete. Iha bahasa Rede komputador nia signifika katak Repete fahe dadus signal ne'ebe bele aumenta velocidade dadus maksimun. No Repeater mos ajuda ita, wainhira ita iha fatin ne'ebe mak signal lan dun forsa. ✓ Funsaun: = Funsaun Repeater mak atu haluan signal iha area ida, no halo ema fasil tebes atu asesu ba signal WiFi, no halo fasil ba processu fahe data no simu data.

16.	Router		 ✓ Definisaun : = Router hanesan material ida ne'ebe iha Rede komputador nian ida ne'ebe mak halo ligasaun ba iha Rede/jaringan ne'ebe hanesan no lahanesan. Router mos hanesan material ida ne'ebe atu fahe Pakote dadus liu husi Rede/Jaringan no mos liu husi Internet, atu to iha nia objetivu, prosesu ne'ebe ema bolu Routing. ✓ Funsaun : = Router nia funsaun sai hanesan parte ida ne'ebe fahe IP address, liu husi statistik ka DHCP(Dynamic Host Configuration Protocol), ba iha komputador sira ne'ebe mak konekta hela ba Router. Wainhira Router fahe IP address ne'ebe mak uniku ba iha komputador sira entaun komputador sira bele halo komonikasaun ba malu, liu husi LAN ka internet.
17.	Modem	TP-LINK Reviews Is Reader © 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0	 ✓ Definisaun : = MODEM nia signifika mak hanesan (Modulator DEModulator). Modulator mak hanesan parte ida ne'ebe bele troka signal Informasaun sai fali signal pembawa/ Lori(Carrier) no pronto atu fahe/transfer, no Demodulator hanesan parte ida ne'ebe atu haketak signal Informasaun ne'ebe iha Data no SMS husi signal Pembawa, atu nu'une'e SMS ne'ebe ema simu mos ho diak. ✓ Funsaun : = Modem nia funsaun mak hanesan material ida ne'ebe iha funsaun atu halo komonikasaun liu husi jalur rua, ne'ebe muda signal digital sai fali signal analog ou fahe sms/dadus ba fatin ne'ebe mak atu fahe ba, no modem mos ita bele dehan katak hanesan material ida ne'ebe bele halo konekta ita nia komputer ba iha Rede internet.
18.	Modem Internal		 ✓ Definisaun : = Modem Internal mak modem ida ne'e pasan antes kedas iha CPU nia lara. Modem Internal mak card ida ne'ebe pasan iha motheboard, modem internal pasan iha slot ISA/PCI.

			 ✓ Funsaun : = Funsaun modem internal atu muda signal digital sai fali ba sgnal analog(modulasi) atu nu'une fahe liu husi channel telefone no hanesan mos troka signal analog (demodulasi) sai fali signal digital atu nu'une komputador bele komprende.
19.	Modem External	Modem External	 ✓ Definisaun : = Modem Eksternal mak modem ida ne'ebe mak pasan iha liu/la iha CPU nia laran, hafoin mak liga fali ba CPU liu husi port COM/USB, no modem external presisa mos adaptor atu energia ne'ebe tama mos sukat no tuir modem eksternal nia hakarak. ✓ Funsaun : = Funsaun modem eksternal atu muda signal digital sai fali ba sgnal analog(modulasi) atu nu'une fahe liu husi channel telefone no hanesan mos troka signal analog (demodulasi) sai fali signal digital atu nu'une komputador bele komprende.
20.	Access Point		 ✓ Definisaun : = Access point iha rede komputador nia mak dalan/jalur ida atu ita asesu ba nirkabel (Wireless Access Point ou AP) hanesan material ida ne'ebe bele pastikan atu cliente sira bele konek ta ba Rede Nirkabel/La uza kabu, liu husi Wi-fi, Bluetooth no sira seluk tan. Access Point hanesan mos material Rede nian ida ne'ebe iha Transceiver no Antena atu tranfer data no simu data husi kliente sira. Access Point bele uza hodi halo Koneksaun Wireless iha Rede ida. ✓ Funsaun : = Access Point nia funsaun atu komanda data/dadus ne'ebe lao ba mai, atu nu'une cliente sira bele foti liu husi konekta ba Rede/Jaringan (Network).

23.	Scanner	 ✓ Definisaun : Scaner mak material eletronik ida ne'ebe atu hanesan ho mesin kopi, maibe sira rua lahanesan mesin fotocopy nia resultadu langsun hare iha surat tahan, maibe, Scaner nia resultadu sei tampil iha laya monitor, no sei halo processu manual iha komputer. Dadus ne'ebe foti husi scaner sei hatama langsun aplikasi sira ne'ebe mak hatene dadus sira ne'e. ✓ Funsaun :
24.	Satellite	 ✓ Definisaun : = Satelite mak hanesan material teknologia nian ida ne'ebe mak cangih, halo husi ema nia hanoin, atu ajuda ema nia atividade no halo mudansa ba ema kona-ba material foun ne'ebe bele kobre mundu tomak. Satelite ne'e rai ida loron leten ho maneira ema kendali/ema mak kaer husi rai hodi semo to loron leten. ✓ Funsaun : = Funsaun Satelite mak hanesan fahe signal ne'ebe mak distansia dok, hanesan WAN internet Global, Bele hare Tempu bailoron ka udan, Repeater iha loron leten, no satelite mos bele cek material material sira ne'ebe mak iha rai.

25. Port Netw	ork	 ✓ Definisaun : = Port network mak hanesan port ida ne'ebe iha mos hanesan material Rede komputador nian ida, hanesan Ethernet ou LAN card. ✓ Funsaun : = Port Network nia funsaun atu Tu konektor RJ45 ba atu nu'une komputador bele iha ligasaun ba malu, no bele transfer dadus ba malu entre komputador ida ho komputador sira neluk.
